

YEAR-ROUND SYNTHETIC ICE RINKS OF PE 500

Ladies and Gentlemen,

We are introducing you with not yet all known technology of new year-round skating rink in panels of synthetic EP that does not require expensive cooling systems.

Skating is characterized by a very long life, short assembly time and multiple removable and move to another location. Especially recommended for rental, maintenance events - the ability to install and even within the conference "overnight panels are made of high density polyethylene (PE500 modified HMW) in the format 2000 x 1000 and thicknesses 18, 20, 25mm shaped type" S " and "L".

Natural and white color panels are produced in two versions: a "pure original" PE granules and mixed with wax. The latter makes an even better gliding properties and long life panels.

Installation of panels is very simple and takes place on a merger How | paneling, tongue - groove "additionally" stiffened by specially prepared pins on a level flat surface, in the absence of even and stiff surface, installation should take place, for example, wood pallets covered with a protective film against scratches of the bottom of panels. Each panel can be used twice - first and second side - which further extends the service life without the need for additional operating procedures. Construction time for an ice rink with an area of around 200m² for 4 people takes up to 2 days (before installation of panels and adequately trained band of hockey - also available in our offer). In order to obtain suitable conditions for sliding, you should spray previously prepared and assembled panels with glycol mixed in proper proportions with water. After such preparation the panels are fully functional after about 12-15 hours after the first spraying.

Lifetime of the panels is about 8-10 years. Warranty - 5 years. "Sliding ability" compared to the real ice is about one 96%. Weight of the panel is 35kg. More information is available on request by email or telephone. In pursuit of delivery we provide expert advice and technical service at every stage of preparation and implementation of investment.

We invite you to cooperate;
